4. GET Profit & Loss.....	10

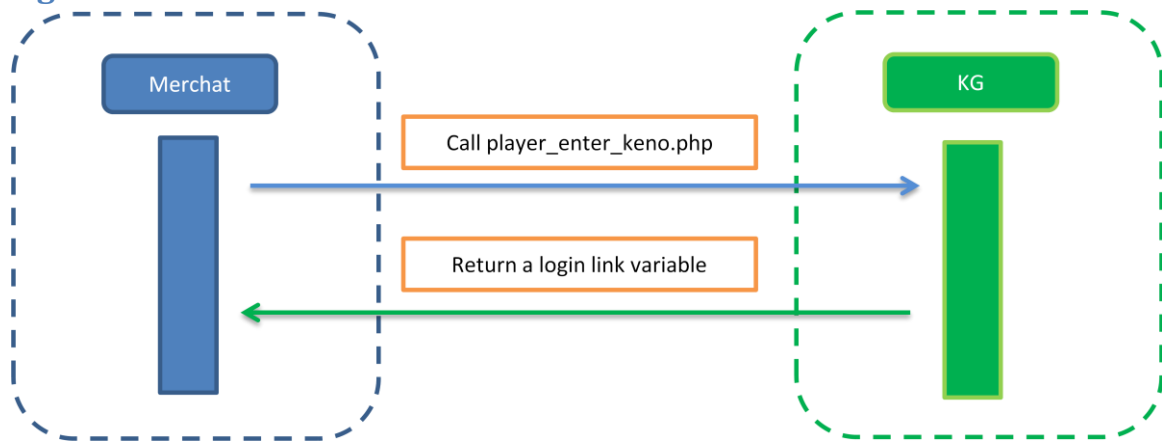

1. Login

Login			
<parameter>	*	<type>	<description>
VendorSite	*	text	Vendor client side frontend url
FundLink	*	text	vendor for player fund in/out url
VendorId	*	int(10)	kenogroup assigned vendor id
PlayerId	*	varchar(100)	vendor assigned player id (should be unique to each vendor)
PlayerRealName	*	varchar(50)	player game front-end name display
PlayerCurrency	*	varchar(3)	player credit currency (kenogroup will check the player currency if came before, not match will reject)
PlayerCredit	*	float(10,2)	0, please put 0 on this value.
PlayerAllowStake	*	int(10)	player allow to select the stake limit group, vendor should setup the stake group before on kenogroup vendor admin website
Trial	*	tinyint(4)	identify the account is for trial
Language	*	varchar(10)	language display of the player frontend
PlayerIP	*	varchar(15)	passing the player using ip address
VendorRef		varchar(100)	vendor generate reference number for checking
Remarks		text	remark information for add on information use

XML Structure Example
Call Strcuture <pre> <?xml version="1.0" encoding="iso-8859-1"?> <methodCall> <methodName>PlayerLanding</methodName> <params> <param> <value> <struct> <member><name>VendorSite</name><value><string>XXX</string></value></member> <member><name>FundLink</name><value><string>XXX</string></value></member> <member><name>VendorId</name><value><string>XXX</string></value></member> <member><name>PlayerId</name><value><string>XXX</string></value></member> <member><name>PlayerRealName</name><value><string>XXX</string></value></member> <member><name>PlayerCurrency</name><value><string>XXX</string></value></member> <member><name>PlayerCredit</name><value><string>XXX</string></value></member> <member><name>PlayerAllowStake</name><value><string>XXX</string></value></member> <member><name>Trial</name><value><string>XXX</string></value></member> <member><name>Language</name><value><string>XXX</string></value></member> <member><name>PlayerIP</name><value><string>XXX</string></value></member> <member><name>VendorRef</name><value><string>XXX</string></value></member> <member><name>Remarks</name><value><string>XXX</string></value></member> </struct> </value> </param> </params> </methodCall> </pre>

Success Response	
<pre><?xml version="1.0" encoding="iso-8859-1"?> <methodResponse> <params> <param> <value> <struct> <member><name>Link</name><value><string>XXX</string></value></member> </struct> </value> </param> </params> </methodResponse></pre>	
Fail Response	
<pre><?xml version="1.0" encoding="iso-8859-1"?> <methodResponse> <params> <param> <value> <struct> <member><name>Error</name><value><string>XXX</string></value></member> </struct> </value> </param> </params> </methodResponse></pre>	
Fail: status false with error reason	
VENDOR NOT AUTHORIZED	the xmlrpc request ip is not match the vendor setting
VENDOR ACCOUNT SUSPENDED	vendor account suspended
NOT ACCEPT NEGATIVE AMOUNT TRANSFER	only accept positive or 0 credit transfer
GAME SERVER MAINTENANCE	game server down or cannot connect
GAME SERVER NOT APPROPRIATE	requested connect game server is not associated with vendor
PLAYER ACCOUNT SUSPENDED	player came before and account suspended
PLAYER CURRENCY NOT SUPPORT	player requested currency does not support in kenogroup system
PLAYER CURRENCY NOT MATCH BEFORE	player came before and requested currency not match the existing record
PLAYER STAKE NOT BELONG TO VENDOR (ONLY ALLOW: [X,X,X])	requested stake not belong to vendor, only allow stake inside the bracket

Figure 1.1

2. Tranfer

Transfer			
<parameter>	*	<type>	<description>
VendorId	*	int(10)	kenogroup assigned vendor id
PlayerId	*	varchar(100)	vendor assigned player id (should be unique to each vendor)
Amount	*	decimal(10,2)	player amount wish to transfer, positive means deposit to KENO, negative means withdraw from KENO.
PlayerIP	*	varchar(15)	passing the player using ip address
VendorRef	*	varchar(100)	vendor generate unique reference number for checking

XML Structure Example
Call Strcuture <pre><?xml version="1.0" encoding="iso-8859-1"?> <methodCall> <methodName>FundInOut</methodName> <params> <param> <value> <struct> <member><name>VendorId</name><value><string>XXX</string></value></member> <member><name>PlayerId</name><value><string>XXX</string></value></member> <member><name>Amount</name><value><string>XXX</string></value></member> <member><name>PlayerIP</name><value><string>XXX</string></value></member> <member><name>VendorRef</name><value><string>XXX</string></value></member> </struct> </value> </param> </params> </methodCall></pre>
Success Response <pre><?xml version="1.0" encoding="iso-8859-1"?> <methodResponse> <params> <param> <value> <struct> <member><name>Remain</name><value><string>XXX</string></value></member> </struct> </value> </param> </params> </methodResponse></pre>
Fail Response <pre><?xml version="1.0" encoding="iso-8859-1"?> <methodResponse> <params> <param></pre>

```

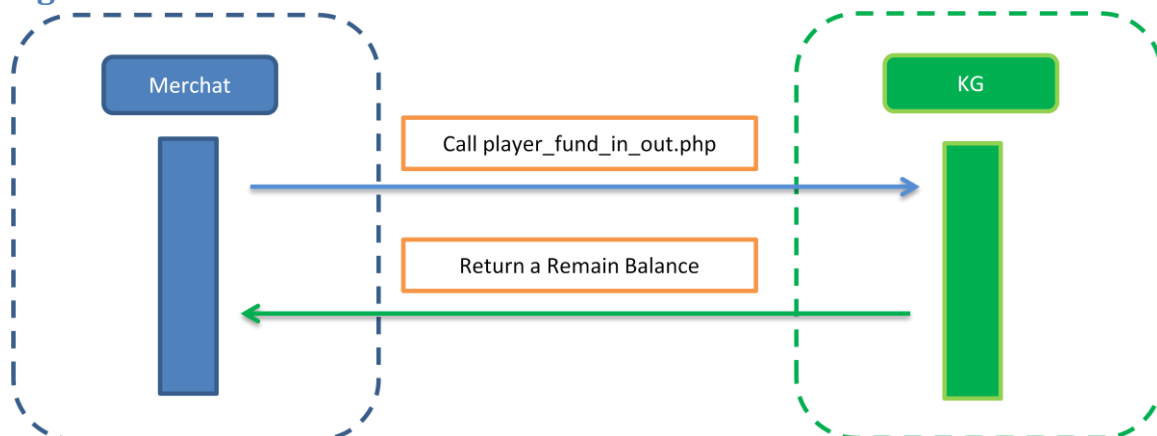

<value>
  <struct>
    <member><name>Error</name><value><string>XXX</string></value></member>
  </struct>
</value>
</param>
</params>
</methodResponse>

```

Fail: status false with error reason

VENDOR NOT AUTHORIZED	the xmlrpc request ip is not match the vendor setting
VENDOR ACCOUNT SUSPENDED	vendor account suspended
PLAYER NOT FOUND	player not found in kenogroup database
NOT ENOUGH CREDIT TO FUND OUT	not enough credit

Figure 2.1

http://test.integrate.v88kkg.com/player_fund_in_out.php

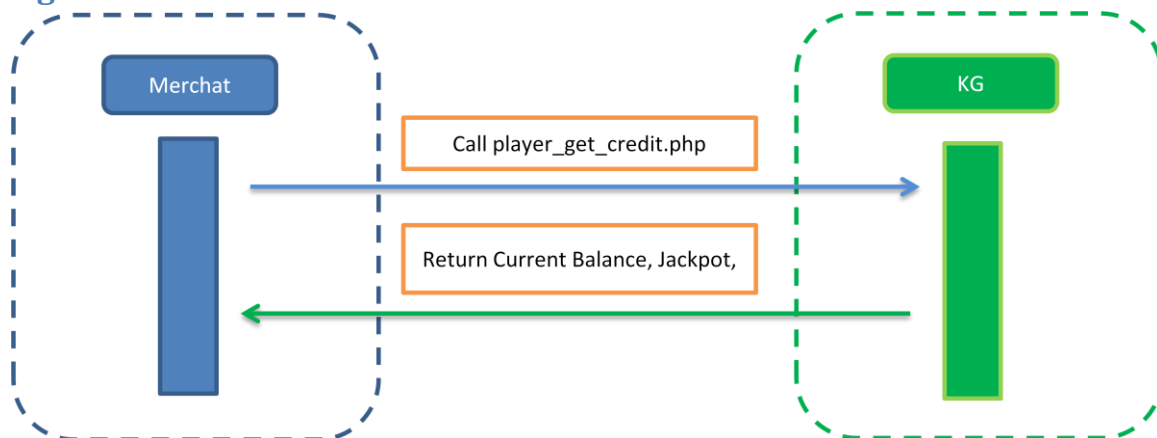

3. Check Credit

Transfer			
<parameter>	*	<type>	<description>
VendorId	*	int(10)	kenogroup assigned vendor id
PlayerId	*	varchar(100)	vendor assigned player id (should be unique to each vendor)

XML Structure Example
Call Strcuture <pre><?xml version="1.0" encoding="iso-8859-1"?> <methodCall> <methodName>GetCredit</methodName> <params> <param> <value> <struct> <member><name>VendorId</name><value><string>XXX</string></value></member> <member><name>PlayerId</name><value><string>XXX</string></value></member> </struct> </value> </param> </params> </methodCall></pre>
Success Response <pre><?xml version="1.0" encoding="iso-8859-1"?> <methodResponse> <params> <param> <value> <struct> <member><name>Credit</name><value><string>XXX</string></value></member> <member><name>Jackpot</name><value><string>XXX</string></value></member> <member><name>Status</name><value><string>XXX</string></value></member> <member><name>LastLoginTime</name><value><string>XXX</string></value></member> </struct> </value> </param> </params> </methodResponse></pre>
Fail Response <pre><?xml version="1.0" encoding="iso-8859-1"?> <methodResponse> <params> <param> <value> <struct> <member><name>Error</name><value><string>XXX</string></value></member> </struct> </value></pre>

</param> </params> </methodResponse>	
Fail: status false with error reason	
VENDOR NOT AUTHORIZED	the xmlrpc request ip is not match the vendor setting
VENDOR ACCOUNT SUSPENDED	vendor account suspended
PLAYER NOT FOUND	player not found in kenogroup database

Figure 3.1

http://test.integrate.v88kkg.com/player_get_credit.php

4. GET Profit & Loss

Transfer			
<parameter>	*	<type>	<description>
VendorId	*	int(10)	kenogroup assigned vendor id
Date	*	Date	Date of the Profit & Loss
HourType	*	Int(1)	1 is 12:00:00-12:00:00, 2 is 00:00:00 – 23:59:59

XML Structure Example
Call Strcuture <pre><?xml version="1.0" encoding="iso-8859-1"?> <methodCall> <methodName>GetPNL</methodName> <params> <param> <value> <struct> <member><name>VendorId</name><value><string>XXX</string></value></member> <member><name> Date</name><value><string>XXX</string></value></member> <member><name> HourType</name><value><string>XXX</string></value></member> </struct> </value> </param> </params> </methodCall></pre>
Success Response <pre><?xml version="1.0" encoding="iso-8859-1"?> <methodResponse> <params> <param> <value> <array> <data> <value> <struct> <member> <name>PlayerId</name> <value> <string>xxx</string> </value> </member> <member> <name>Total_Stake_Accurate</name> <value> <string>xxx</string> </value> </member> <member> <name>Total_PNL</name> <value> <string>xxx</string> </value> </member> </struct> </value> </data> </array> </value> </param> </params></pre>

</value> </member> </struct> </value> </data> </array> </value> </param> </params> </methodResponse>	
Fail Response	
<?xml version="1.0" encoding="iso-8859-1"?> <methodResponse> <params> <param> <value> <struct> <member><name>Error</name><value><string>XXX</string></value></member> </struct> </value> </param> </params> </methodResponse>	
Fail: status false with error reason	
VENDOR NOT AUTHORIZED	the xmlrpc request ip is not match the vendor setting
VENDOR ACCOUNT SUSPENDED	vendor account suspended
VENDOR ID NOT VALID	Vendor id must be integer
DATE FORMAT NOT VALID	E.g. valid date is 2012-01-10
HOURTYPE NOT VALID	1 is 12:00:00-12:00:00, 2 is 00:00:00 – 23:59:59
DATE NOT VALID MUST BEFORE THAT	The date must before the current date.
